Statistics Canada Statistique Canada Canadä<sup>\*</sup>

#### Data in many forms

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered. Data are available on the Internet, compact disc, diskette, computer printouts, microfiche and microfilm, and magnetic tape. Maps and other geographic reference materials are available for some types of data. Direct online access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable database and retrieval system.

#### How to obtain more information

Inquiries about this publication and related statistics or services should be directed to: Labour Force Survey Section, Household Surveys Division, Statistics Canada, Ottawa, Ontario, K1A 0T6 (telephone: (613) 951-9448) or to the Statistics Canada Regional Reference Centre in:

Unliford	(000) 400 F004	Dogina	(306) 780-5405
Halifax	(902) 426-5331	Regina	,
Montréal	(514) 283-5725	Edmonton	(403) 495-3027
Ottawa	(613) 951-8116	Calgary	(403) 292-6717
Toronto	(416) 973-6586	Vancouver	(604) 666-3691

# Ordering/Subscription information

#### All prices exclude sales tax

Catalogue no. 71-201-XPB, is published annually in a paper version for \$114.00 in Canada. Outside Canada the cost is US\$114.00.

Please send orders to Statistics Canada, Operations and Integration Division, Circulation Management, 120 Parkdale Avenue, Ottawa, Ontario, K1A 0T6 or by dialling (613) 951-7277 or 1 800 700-1033, by fax (613) 951-1584 or 1 800 889-9734 or by Internet: order@statcan.ca. For change of address, please provide both old and new addresses. Statistics Canada publications may also be purchased from authorized agents, bookstores and local Statistics Canada offices.

#### Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner and in the official language of their choice. To this end, the agency has developed standards of service which its employees observe in serving its clients. To obtain a copy of these service standards, please contact your nearest Statistics Canada Regional Reference Centre.

# Des données sous plusieurs formes

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes. Les données sont disponibles sur Internet, disque compact, disquette, imprimé d'ordinateur, microfiche et microfilm, et bande magnétique. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

### Comment obtenir d'autres renseignements

Toute demande de renseignements au sujet de la présente publication ou au sujet de statistiques ou de services connexes doit être adressée à : Section de l'enquête sur la population active, Division des enquêtes-ménages, Statistique Canada, Ottawa, Ontario, K1A 0T6 (téléphone : (613) 951-9448) ou à l'un des centres de consultation régionaux de Statistique Canada :

Halifax Montréal	(902) 426-5331 (514) 283-5725	Regina Edmonton	(306) 780-5405 (403) 495-3027

# Note of appreciation

Canada owes the success of its statistical system to a long-standing co-operation involving Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued co-operation and goodwill.

#### Note de reconnaissance

Le succès du système statistique du Canada repose sur un partenariat bien établi entre Statistique Canada et la population, les entreprises, les administrations canadiennes et les autres organismes. Sans cette collaboration et cette bonne volonté, il serait impossible de produire des statistiques précises et actuelles.

# THIS PUBLICATION WAS PREPARED UNDER THE DIRECTION OF:

Mike Sheridan, Director General, Labour and Household Surveys Branch (613) 951-9480

Maryanne Webber, Director, Household Surveys Division (613) 951-2899

Deborah Sunter, Assistant Director, Labour Force Survey Sub-division (LFS), Household Surveys Division (613) 951-4740

#### LFS Unit Heads:

- Jean-Marc Lévesque, Analysis (613) 951-2301
- Ross McOrmond, Data Processing (613) 951-4734
- Royal Généreux, Processing (613) 951-4725

with the assistance of the staff members of Labour Force Survey Sub-division.

# OTHER SOURCES OF LABOUR FORCE SURVEY DATA

#### **CANSIM**

Most of the data published in <u>Historical Labour Force Statistics</u> (catalogue 71-201-XPB) are also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System). Users interested in accessing data via CANSIM should contact one of Statistics Canada's regional centres at the numbers listed on the inside front cover of this publication, or contact the Marketing Division, Statistics Canada, R.H. Coats Building, Ottawa, Ontario, K1A 0T6 (613) 951-8200.

#### **CD-ROM**

A wide variety of data (including those contained in this publication) are available on the <u>Labour Force Historical Review CD-ROM</u> (71F0004XCB). This CD-ROM retails for only \$195.00. Order now by contacting the Statistics Canada Regional Centre nearest to you or our Order Desk on Internet at <u>order@statcan</u>.ca.

# Unpublished data

Additional data are also available on request from the Labour Force Survey Sub-division, on a cost recovery basis.

The paper used in this publication meets the minimum requirements of American National Standard for Information Sciences - Permanence of Paper for Printed Library Materials, ANSI Z39.48 - 1984.

# CETTE PUBLICATION A ÉTÉ PRÉPARÉ SOUS LA DIRECTION DE:

Mike Sheridan, Directeur général, Direction des enquêtesménages et du travail (613) 951-9480

Maryanne Webber, Directeur, Division des enquêtes-ménages (613) 951-2899

Deborah Sunter, Directrice adjointe, Sous-division de l'enquête sur la population active (EPA), Division des enquêtes-ménages (613) 951-4740

Les chefs d'unité de l'EPA:

- Jean-Marc Lévesque, Analyse (613) 951-2301
- Ross McOrmond, Traitement des données (613)951-4734
- Royal Généreux, Traitement (613) 951-4725

avec l'aide du personnel de la sous-division de l'enquête sur la population active.

# AUTRES SOURCES DES DONNÉES DE L'ENQUÊTE SUR LA POPULATION ACTIVE

#### CANSIM

La plupart des données publiées dans <u>Statistiques chronologiques sur la population active</u> (n°71-201-XPB au catalogue) peuvent être obtenues sous forme lisible par machine de CANSIM (Système canadien d'infor-mation socioéconomique). Les utilisateurs voulant obtenir des chiffres par l'intermédiaire de CANSIM peuvent contacter un des centres de consultation de Statistique Canada dont les numéros de téléphone figurent au verso du couvert de cette publication ou en communiquant directement avec <u>la Division du marketing</u>, Statistique Canada, Immeuble R.H. Coats, Ottawa, Ontario, K1A 0T6 (613) 951-8200.

#### **CD-ROM**

Un grand éventail de données (incluant celles contenues dans cette publication) sont disponible sur le CD-ROM de la Revue chronologique de la population active (71F0004XCB). Ce CD-ROM se vend à seulement 195 \$. Commandez dès maintenant en contactant le bureau régional de Statistique Canada le plus près de chez vous ou notre bureau de commande sur Internet à order@statcan.ca.

# Données non publiées

Des données additionnelles sont également disponibles sur demande par le biais de la sous-division de l'Enquête sur la population active, selon le principe de recouvrement des coûts.

Le papier utilisé dans la présente publication répond aux exigences minimales de l'"American National Standard for Information Sciences" - "Permanence of Paper for Printed Library Material", ANSI Z39.48 - 1984.

#### Overview

Employment grew by an estimated 62,000 in December, bringing gains over the year to 363,000 (+2.6%). The strong employment increase in December was accompanied by a sharp decline in the number of unemployed. This pushed the unemployment rate down 0.4 percentage points to 8.6%, the lowest since September 1990.

# **Employment - Emploi**

The robust employment growth in 1997 reflects the positive overall economic performance observed so far for the year. At 2.6%, the rate of job growth nearly doubled that of 1996~(+1.4%) and almost matched 1994~(+2.9%), when employment showed the best gain of the decade.

#### Continued gains in full-time employment

Full-time employment surged by 111,000 in December, following an increase of 41,000 in November. During 1997, the number of persons working full-time hours increased by 377,000 (+3.4%) and accounted for all of the employment growth.

A drop of 49,000 in December leaves part-time employment down 14,000 (-0.5%) over the year.

#### More jobs for adults

Adults aged 25 and over accounted for the employment growth in December, with the gains equally distributed between adult men (+30,000) and adult women (+31,000).

#### Apercu

En décembre, l'emploi a augmenté d'environ 62 000, ce qui porte à 363 000 les gains enregistrés depuis le début de l'année (+2,6 %). Cette forte hausse de l'emploi en décembre s'est accompagnée d'une nette diminution du nombre de chômeurs. Le taux de chômage a ainsi diminué de 0,4 point de pourcentage pour s'établir à 8,6 %, son plus bas niveau depuis septembre 1990.

# Unemployment rate - Taux de chômage

La croissance soutenue de l'emploi en 1997 reflète la bonne performance de l'économie observée depuis le début de l'année. À 2,6%, le taux de croissance de l'emploi a été près de deux fois supérieur à celui de 1996 (+1,4 %) et a presque atteint le taux de 1994 (+2,9 %), année où a été enregistrée la plus forte croissance de la décennie.

# La progression de l'emploi à temps plein se poursuit

L'emploi à temps plein a fait un bond de 111 000 en décembre, après avoir enregistré un gain de 41 000 en novembre. Pour l'ensemble de l'année 1997, le nombre de personnes travaillant à temps plein a augmenté de 377 000 (+3,4 %), ce qui représente la totalité de la croissance de l'emploi.

L'emploi à temps partiel, en recul de 49 000 en décembre, affiche une baisse de 14 000 (-0,5 %) en 1997.

#### Davantage d'emplois pour les adultes

L'augmentation de l'emploi en décembre s'est produite chez les adultes âgés de 25 ans et plus, les gains étant également répartis entre les hommes (+30 000) et les femmes (+31 000).

During 1997, employment increased by 201,000 (+3.1%) among adult men and by 147,000 (+2.8%) among adult women. Employment growth over the year pushed the unemployment rate down to 7.1% (-1.4) for adult men and 7.3% (-1.1) for adult women.

Employment among youths aged 15 to 24 was little changed in December while their participation in the labour force weakened further. This pushed the youth unemployment rate down by 0.3 percentage points to 15.8%. Increasing school attendance underlies the continued decline in youth labour force participation, since students are much less likely to be employed or searching for a job than non-students. The proportion of youths in school in the fourth quarter of 1997 was 62.0%, up from 60.4% in 1996.

Over the year, employment among youths increased slightly by  $16,000 \ (+0.8\%)$  as gains over the summer offset losses earlier in the year. The employment rate in December for youths was  $51.2\% \ (0.1 \text{ percentage points higher than a year ago)}$ .

#### Services and manufacturing lead growth in 1997

December's employment increase was due to robust growth in manufacturing (+28,000), and health and social services (+36,000).

Over the year, employment in the goods-producing sector increased 2.9%, with employment in manufacturing up 136,000 (+6.5%). Much of the job growth in manufacturing in 1997 is attributable to durable goods, where employment is up 9.3%, while non-durable goods grew by 3.6%.

Despite little employment change in construction in recent months, there were increases earlier in the year, bringing total gains in 1997 to  $17,000 \ (+2.3\%)$ . Employment in agriculture declined by  $49,000 \ (-10.5\%)$ .

En 1997, l'emploi a progressé de 201 000 (+3,1 %) chez les hommes adultes et de 147 000 (+2,8 %) chez les femmes adultes. Cette croissance de l'emploi au cours de la dernière année a fait baisser le taux de chômage à 7,1 % (-1,4) chez les hommes et à 7,3 % (-1,1) chez les femmes.

L'emploi chez les jeunes âgés de 15 à 24 ans a peu varié en décembre, mais le nombre de jeunes faisant partie de la population active a continué de régresser. Cela s'est traduit par une diminution du taux de chômage chez les jeunes, lequel a reculé de 0,3 point pour s'établir à 15,8 %. La diminution de la participation des jeunes à la population active est directement liée à l'augmentation de la fréquentation scolaire, les étudiants étant beaucoup moins susceptibles d'être occupés ou à la recherche d'un emploi que les non-étudiants. Durant le quatrième trimestre de 1997, le pourcentage des jeunes fréquentant l'école s'élevait à 62,0 %, comparativement à 60,4 % en 1996.

Au cours de l'année 1997, l'emploi chez les jeunes a affiché une légère hausse de  $16\,000\,(+0.8\,\%)$ , les gains de l'été ayant compensé les pertes enregistrées en début d'année. Le taux d'emploi chez les jeunes affichait  $51.2\,\%$  en fin d'année (+0.1).

# Les services et le secteur manufacturier stimulent la croissance de l'emploi en 1997

L'augmentation de l'emploi en décembre est attribuable aux fortes croissances enregistrées dans le secteur manufacturier (+28 000) et dans la branche de la santé et des services sociaux (+36 000).

Au cours de l'année 1997, l'emploi dans le secteur des biens a augmenté de 2,9 %, la hausse atteignant 136 000 dans les industries manufacturières (+6,5 %). La majeure partie de cette progression est attribuable à la fabrication de biens durables, où l'augmentation a été de 9,3 %, comparativement à un gain de 3,6 % pour les biens non durables.

L'emploi dans la construction a peu fluctué au cours des derniers mois, mais les hausses enregistrées plus tôt cette année ont porté à 17 000 le gain total pour 1997 (+2,3 %). Dans l'agriculture, l'année se termine avec une perte de 49 000 emplois (-10,5 %).

Employment in the service-producing sector grew by 2.6% in 1997, with robust gains of 149,000 in business and personal services (primarily business services) and 78,000 in transportation, storage and communications. Employment in health and social services rose by 31,000, mostly due to gains over the past two months.

# Increase in the number of private sector employees

Almost all of the employment growth in December was among employees in the private sector (+56,000), bringing gains over the year to 292,000 (+3.1%).

Self-employment, although little changed in December, fell during the three previous months (-92,000). These declines follow strong gains earlier in the year, leaving the number of self-employed up 87,000 (+3.6%) over 1997.

While public sector employment was little changed in November and December, job losses since the beginning of the year total 15,000 (-0.7%).

#### Ouébec and Ontario end 1997 on a high note

December's employment gain was concentrated in Québec (+30,000) and Ontario (+32,000). Over 1997, employment grew steadily in Québec, up 99,000 (+3.1%). The job growth was mostly in manufacturing and the service-producing sector. Employment growth in 1997, along with a drop in unemployment, pushed the unemployment rate down to 10.4% (-1.7).

Employment gains in Ontario over 1997 totaled 163,000 (+3.1%). The increase was widespread in several industries, especially business and personal services, transportation, storage and communications, trade, and manufacturing. The unemployment rate fell to 7.8% (-1.3).

Employment growth over 1997 was also above the national average in most other provinces except British Columbia, Prince Edward Island and Manitoba.

L'emploi dans le secteur des services a augmenté de 2,6 % en 1997, des gains appréciables ayant été enregistrés dans les services personnels et aux entreprises (+149 000, principalement dans les services aux entreprises) et dans la branche des transports, de l'entreposage et des communications (+78 000). L'emploi dans la santé et les services sociaux termine l'année en hausse de 31 000 (+2,2 %), notamment grâce aux gains réalisés au cours des deux derniers mois

# Augmentation du nombre d'employés dans le secteur privé

La presque totalité de la croissance de l'emploi en décembre s'est produite chez les employés du secteur privé (+56 000), le gain chez ces derniers se chiffrant à 292 000 pour l'année (+3,1 %).

Le nombre de travailleurs indépendants a peu changé en décembre, après avoir reculé pendant les trois mois précédents (-92 000). Ces baisses faisaient suite à de forts gains enregistrés en début d'année, ce qui laisse le nombre de travailleurs indépendants en hausse de 87 000 (+3.6 %) en 1997.

Bien que l'emploi dans le secteur public ait peu changé en novembre et décembre, les pertes d'emplois depuis le début de l'année s'élèvent à 15 000 (-0,7 %).

# Le Québec et l'Ontario terminent l'année sur une bonne note

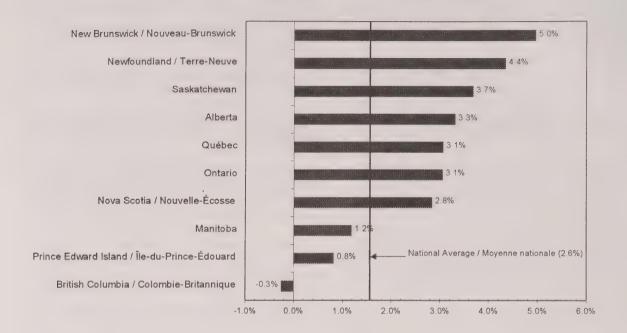

La croissance de l'emploi en décembre était concentrée au Québec (+30 000) et en Ontario (+32 000). Au Québec, l'emploi a connu une croissance soutenue en 1997, terminant l'année en hausse de 99 000 (+3,1%). Cette croissance s'est principalement manifestée dans les industries manufacturières et dans le secteur des services. La hausse du nombre d'emplois en 1997, conjuguée à une baisse du nombre de chômeurs, a fait diminuer le taux de chômage dans cette province à 10,4% (-1,7).

La hausse de l'emploi en Ontario totalise 163 000 (+3,1%) en 1997. Les gains ont été enregistrés dans plusieurs branches d'activité, notamment dans les services personnels et aux entreprises, le transport, l'entreposage et les communications, le commerce et les industries manufacturières. Au cours de l'année, le taux de chômage a reculé de 1,3 point pour s'établir à 7,8 %.

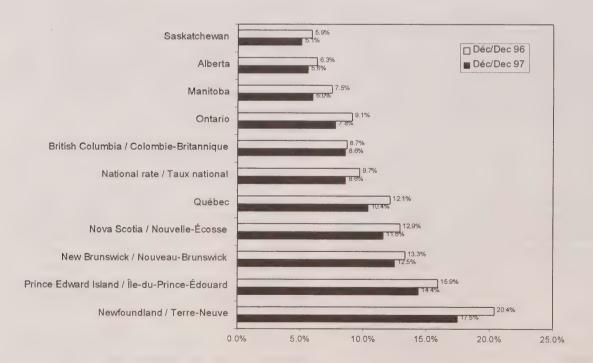

La croissance de l'emploi s'est également avérée supérieure à la moyenne nationale dans la plupart des autres provinces, à l'exception de la Colombie-Britannique, de l'Île-du-Prince-Édouard et du Manitoba.

#### APPENDIX

# The Labour Force Survey

The statistics contained in this report are based on information obtained through a sample survey of households. Interviews are carried out in about 52,000 representative households across the country (excluding the Yukon and Northwest Territories), involving some 96,000 respondents.

The Labour Force Survey, started in November 1945, was taken at quarterly intervals until November 1952. It has been carried out monthly since then. The information generated by the survey has expanded considerably over the years with a major redesign of the survey content in 1976 and again in 1997, and provides a rich and detailed picture of the Canadian labour market. Details of the lates changes are available in a document entitled "The Labour Force Survey: Development of a new questionnaire for 1997, found on the Internet under Research Papers in the virtual library of Statistics Canada (www.statcan.ca). Details of these changes are available on request from the Labour Force Survey Sub-Division, Statistics Canada. Ottawa, K1A 0T6.

The sample used in the Labour Force Survey has been designed to represent all persons in the population 15 years of age and over residing in the provinces of Canada, with the exception of the following: persons living on Indian reserves, full-time members of the armed forces and people living in institutions (for example, inmates of penal institutions and patients in hospitals or nursing homes who have resided in the institution for more than 6 months).

Monthly estimates of employment, unemployment and persons not in the labour force refer to the specific week covered by the survey each month, normally the week containing the 15th day.

For detailed information on the methodology of the Labour Force Survey, see the publication Methodology of the Canadian Labour Force Survey (cat. 71-526).

For detailed information on the LFS questionnaire, see the document <u>Guide to the Labour Force Survey</u> on the Labour Force Historical Review on CD-ROM, or in the Statistics Canada virtual library on the World Wide Web.

# Collecting the Data

Data collection is carried out during the week following the reference week. Statistics Canada interviewers contact each of the households in the sample through personal and/or telephone interviews to obtain the information needed to produce the labour force data. As mentioned earlier, there are approximately 52,000 households interviewed each month. Once a household is selected, it remains in the sample for a period of six months. Each interviewer contacts approximately 75 designated dwellings (the individual assignment size varies by type of area) and conducts a personal interview in all dwellings where interviews are being conducted for the first time. In most areas, provided the respondent agrees, subsequent interviews may be conducted by telephone, an interview technique which has been shown to have no discernable impact on the data and which offers significant savings in time and cost.

# **Definitions and Explanations**

# Labour Force

The labour force is composed of those members of the civilian non-institutional population 15 years of age and over who, during the reference week, were employed or unemployed.

#### APPENDICE

# L'enquête sur la population active

Les statistiques publiées ici sont fondées sur une enquête mensuelle menée auprès d'environ 52 000 ménages représentatifs d'un bout à l'autre du Canada, soit quelque 96 000 répondants (à l'exception du Yukon et des Territoires du Nord-Ouest).

L'enquête sur la population active, lancée en novembre 1945, a eu lieu tous les trois mois jusqu'à novembre 1952. Depuis lors, elle a lieu tous les mois. L'information générée par l'enquête s'est considérablement accrue au cours des années grâce à un remaniement majeur de l'enquête en 1976, suivi d'un autre en 1997, et fournit une image riche et détaillée du marché du travail canadien. Les détails concernant les derniers changements se trouvent dans le document «L'Enquête sur la population active: élaboration d'un nouveau questionnaire pour 1997», disponible sur Internet sous Documents de recherche dans la Bibliothèque virtuelle de Statistique Canada (www.statcan.ca). On peut obtenir des détails sur ces changements en s'adressant à la Sous-division de l'enquête sur la population active, Statistique Canada, Ottawa, K1A 0T6.

L'échantillon retenu aux fins de l'enquête sur la population active représente toutes les personnes de 15 ans et plus résidant dans les provinces du Canada, à l'exception des personnes vivants dans des réserves indiennes, des membres à plein temps des Forces armées et des pensionnaires d'institutions (par exemple les détenus de prison et les malades séjournant à l'hôpital ou dans une maison de repos pour plus de 6 mois).

Les estimations mensuelles de l'emploi, du chômage et des inactifs se rapportent à une semaine bien précise chaque mois, soit normalement celle où tombe le quinzième jour du mois.

Pour des renseignements d'ordre méthodologique de l'Enquête sur la population active, veuillez consulter la publication intitulée <u>Méthodologie de</u> l'Enquête sur la population active du Canada (n° 71-526 au catalogue).

Des renseignements détaillés sur le questionnaire de l'EPA sont contenus dans le document <u>Guide de l'Enquête sur la population active</u> dans, Revue chronologique de la population active du CD-ROM, ou encore dans la bibliothèque virtuelle de Statistique Canada sur le World Wide Web.

# La collecte des données

La collecte des données a lieu au cours de la semaine qui suit la semaine de référence. Les intervieweurs de Statistique Canada communiquent avec les occupants de chacun des ménages de l'échantillon, en personne et (ou) par téléphone, afin de recueillir les renseignements nécessaires pour produire les données sur la population active. Tel que décrit ci-dessus, environ 52 000 ménages sont interviewés chaque mois. Lorsqu'un ménage est choisi, il demeure dans l'échantillon pour une durée de six mois. Chaque intervieweur se met en contact avec les occupants d'environ 75 logements choisis (la tâche individuelle varie selon le genre de région). Lorsqu'il s'agit d'un ménage interviewé pour la première fois, l'intervieweur fait une visite sur place. Dans la majorité des régions, les interviews subséquentes peuvent être réalisées par téléphone, à condition que l'enquêté y consente; cette technique ne semble pas avoir d'effet marqué sur les données et elle permet d'épargner beaucoup de temps et d'argent.

# Définitions et explications

# Population active

La population active comprend les membres de la population civile hors institution âgés de 15 ans et plus qui avaient un emploi (personnes occupées) ou étaient en chômage pendant la semaine de référence.

#### **Employed**

Employed persons are those who, during the reference week:

- a) did any work (see note below) at all
- b) had a job but were not at work due to:
- own illness or disability
- personal or family responsibilities
- labour dispute
- vacation
- other reason not specified above (excluding persons on layoff, between casual jobs, and those with a job to start at a future date.

#### Note:

Work includes any work for pay or profit, that is, paid work in the context of an employer-employee relationship, or self-employment. It also includes unpaid family work where unpaid family work is defined as unpaid work which contributed directly to the operation of a farm, business or professional practice owned by a related member of the household

# Employed full-time

A person is considered to be employed full-time if his/her usual hours at the main job are greater than 29 hours per week.

# Employed part-time

When the number of hours worked at the main job is usually less than 30 hours per week then he/she is considered to be employed part-time.

# Unemployed

Unemployed persons are those who, during the reference week:

- were without work, had actively looked for work in the past four weeks (ending with reference week), and were available for work (see note below);
- had not actively looked for work in the past four weeks but had been on layoff (see note below) and were available for work;
- c) had not actively looked for work in the past four weeks but had a new job to start in four weeks or less from the reference week, and were available for work.

# Notes:

- Persons in this group meeting the following criteria are regarded as available:
- were full-time students seeking part-time work who also met condition
   (ii) below. (Full-time students looking for full-time work are classified as not available for work in the reference week.)
- ii. reported that there was no reason why they could not take a job in reference week, or if they could not take a job it was because of "own illness or disability", "personal or family responsibilities", or "already had a job".
- Persons are classified as being on temporary layoff only when they expect to return to the job from which they were laid off.

#### Personnes occupées

Les personnes occupées sont celles qui, au cours de la semaine de référence:

- a) ont fait un travail (voyez la note en bas) quelconque
- o) avaient un emploi mais n'étaient pas au travail pour l'une des raisons suivants:
- maladie ou invalidité (de l'enquêté)
- obligations personnelles ou familiales
- conflit de travail
- vacances
- autre raison non précisée ci-dessus (n'inclut pas les personnes mises à pied, celles qui étaient inactives entre deux emplois occasionnels et celles qui avaient un emploi devant commencer à une date ultérieure).

#### Note:

On entend par "travail" tout travail fait contre rémunération ou en vue d'un bénéfice, c'est-à-dire le travail fait contre rémunération pour un employeur ou à son propre compte. Il peut également s'agir d'un travail familial non rémunéré, c'est-à-dire d'un travail non rémunéré qui contribue directement à l'exploitation d'une ferme, d'une entreprise ou d'un bureau professionnel, qui est possédé ou exploité par un membre apparenté du ménage.

# L'emploi à temps plein

Une personne est considérée comme un employé à temps plein si elle travaille habituellement plus de 29 heures par semaine à son emploi principal.

# L'emploi à temps partiel

Une personne est considérée comme un employé à temps partiel si elle travaille habituellement moins de 30 heures par semaine à son emploi principal.

# Chômeurs

Les chômeurs sont les personnes qui, au cours de la semaine de référence:

- a) étaient sans emploi, avaient activement cherché du travail au cours des quatre dernières semaines (y compris la semaine de référence) et étaient prêtes à travailler (voyez la note en bas);
- n'avaient pas activement cherché de travail au cours des quatre dernières semaines, mais avaient été mises à pied (voir la note en bas) et étaient prêtes à travailler;
- n'avaient pas activement cherché de travail au cours des quatre dernières semaines, mais devaient commencer un nouvel emploi dans quatre semaines ou moins à compter de la semaine de référence, et étaient prêtes à travailler.

# Notes:

- 1. On considère comme prêtes à travailler les personnes de ce groupe qui:
- Étudiaient à plein temps tout en cherchant du travail à temps partiel et qui répondaient au critère (ii) ci-dessous. (Les étudiants à plein temps qui cherchaient du travail à plein temps ne sont pas considérés comme ayant été prêts à travailler pendant la semaine de référence).
- ii. Ont déclaré qu'il n'y avait aucune raison pour laquelle elles ne pouvaient prendre un emploi pendant la semaine de référence ou ne pouvaient en prendre un en raison "de maladie ou invalidité", "d'obligations personnelles ou familiales", ou "parce qu'elles avaient déjà un emploi".
- On considère comme mises à pied temporaire les personnes qui s'attendent à réintégrer l'emploi qu'elles occupaient avant d'être mises à pied.

#### Not in the Labour Force

Those persons in the civilian non-institutional population 15 years of age and over who, during the reference week, were neither employed nor unemployed.

# **Unemployment Rate**

The unemployment rate represents the number of unemployed persons expressed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, marital status, etc.) is the number unemployed in that group expressed as a percentage of the labour force for that group.

# Participation Rate

The participation rate represents the labour force expressed as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex, marital status, etc.) is the labour force in that group expressed as a percentage of the population for that group.

# Employment Rates (formely the Employment/ Population Ratio)

The employment rate represents the number of persons employed expressed as a percentage of the population 15 years of age and over. The employment rate for a particular group (age, sex, marital status, etc.) is the number employed in that group expressed as a percentage of the population for that group.

# Part-time Rate

The part-time rate represents the number of persons employed part-time expressed as a percentage of the employed. The part-time rate for a particular group (age, sex, marital status, etc.) is the number employed part-time in that group expressed as a percentage of the employed for that group.

# Industry and Occupation

The Labour Force Survey provides information about the occupation and industry attachment of persons employed. Since 1984, these statistics have been based on the 1980 Standard Occupational Classification and the 1980 Standard Industrial Classification. Prior to 1984, the 1971 Occupation Classification Manual and the 1970 Standard Industrial Classification were

The Labour Force Survey also provides information about the occupation and industry attachment of persons unemployed and not in the labour force who have held a job in the past twelve months.

# Family Status

A family is defined as "a group of two or more persons who are living together in the same dwelling and who are related by blood, marriage or adoption". A person living alone or who is related to no one else in the dwelling where he/she lives is classified as an "unattached individual". The head of a family is determined by the respondent's perception of headship and as such is solely a statistical device which has no economic connotation. (A more detailed description of the derivation of family data is available on request.)

#### Rounding

Estimates published by the Labour Force Survey are rounded to the nearest hundreds and expressed in thousands but all derived values (totals, averages, rates, ratios...) are calculated from unrounded figures, except for seasonally adjusted estimates. Therefore, the sum of individual rounded items may not equal the total.

#### Inactifs

Il s'agit de la partie de la population civile hors institution âgée de 15 ans et plus qui était ni occupée ni en chômage pendant la semaine de référence.

# Taux de chômage

Le taux de chômage représente le nombre de chômeurs exprimé en pourcentage de la population active. Le taux de chômage d'un groupe particulier (âge, sexe, état matrimonial, etc.) est le nombre de chômeurs dans ce groupe, exprimé en pourcentage de la population active dans le même groupe.

# Taux d'activité

Le taux d'activité représente la population active exprimée en pourcentage de la population de 15 ans et plus. Le taux d'activité d'un groupe particulier (âge, sexe, état matrimonial, etc.) est la population active dans ce groupe exprimée en pourcentage de la population dans le même groupe.

# Taux d'emploi (antérieurement nommé rapport emploi-population)

Le taux d'emploi représente le nombre de personnes occupées exprimé en pourcentage de la population de 15 ans et plus. Le taux d'emploi d'un groupe particulier (âge, sexe, état matrimonial, etc.) est le nombre de personnes occupées dans ce groupe, exprimé en pourcentage de la population dans le même groupe.

# Taux de temps partiel

Le taux de temps partiel représente le nombre de personnes occupées à temps partiel exprimé en pourcentage du nombre de personnes occupées. Le taux de temps partiel d'un groupe particulier (âge, sexe, état matrimonial, etc.) est le nombre de personnes occupées à temps partiel dans ce groupe, exprimé en pourcentage du nombre de personnes occupées dans le même groupe.

# Branche d'activité et profession

L'enquête sur la population active fournit des renseignements sur la profession et la branche d'activité des personnes occupées. Depuis 1984 ces statistiques sont fondées sur la Classification type des professions de 1980 et sur la Classification type des industries de 1980. Avant 1984, les données étaient groupées selon la Classification des professions du recensement de 1971 et la Classification des activités économiques de 1970.

L'Enquête procure également des renseignements sur la profession et la branche d'activité des chômeurs et de la population inactive qui ont occupé un emploi au cours des douze derniers mois.

# La situation familiale

Une famille est "un groupe de deux personnes ou plus qui vivent ensemble dans le même logement et qui sont apparentées par le sang, le mariage ou l'adoption". Une personne qui vit seule ou qui n'est apparentée à aucun occupant du logement où il (elle) demeure est classée comme "personne seule". On établit qui est le "chef de famille" en demandant à l'enquêté qui est, selon lui, la personne qui joue ce rôle. Ce concept n'a aucune connotation économique; il ne s'agit que d'un mécanisme statistique. (On peut obtenir sur demande une description plus détaillée du calcul des données sur les familles.)

# Arrondissement

Les estimations publiées par l'enquête sur la population active sont publiées en milliers et arrondies en centaines mais toutes les valeurs dérivées (totaux, moyennes, taux, ratios...) sont calculées à partir de chiffres non arrondis, à l'exception des estimations désaisonnalisées. Ainsi, la somme des composantes individuelles arrondies n'est pas toujours égale au total publié.

# Seasonal Adjustment

Fluctuations in economic time series are caused by seasonal, cyclical and irregular movements. A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as climate, holidays, vacation periods and cycles related to crops, production and retail sales associated with Christmas and Easter. It should be noted that the seasonally adjusted series contains irregular as well as longer-term cyclical fluctuations.

The seasonal adjustment program is a complicated computer program which differentiates between these seasonal, cyclical and irregular movements in a series over a number of years and, on the basis of past movements, estimates appropriate seasonal factors for current data. On an annual basis, the historic series of seasonally adjusted data is revised in light of the most recent information on changes in seasonality.

The seasonally adjusted series in this publication have been derived using the X-11-ARIMA method developed at Statistics Canada in 1980 to improve the accuracy of seasonal factor estimates. This method is a modified version of the X-11 variant of the Census Method II seasonal adjustment program of the U.S. Bureau of the Census. The modification involves using ARIMA (autogressive integrated moving average) models to produce twelve-month projections of the unadjusted data series; the projected data are then added to the series for purposes of seasonal adjustment. For a detailed description of the procedure, the reader is referred to the technical paper "The X-11 ARIMA/88 Seasonal Adjustment Method". Information regarding seasonal adjustment is also available from the Labour Force Survey Sub-division or the Time Series Research and Analysis Division, Statistics Canada.

Seasonally adjusted estimates of the <u>labour force</u> are derived by summing seasonally adjusted employment and seasonally adjusted unemployment.

Seasonally adjusted employment and unemployment totals for Canada are derived by the summation of the appropriate seasonally adjusted figures for mens 15-24, men 25 to 54, men 55 and over, women 15-24, women 25 to 54 and women 55 and over.

A harmonization process is applied to the seasonally adjusted series of <u>all</u> <u>national and provincial</u> employment series to correspond to the seasonally adjusted total employment series.

Seasonally adjusted <u>unemployment rates</u> are the seasonally adjusted unemployment levels expressed as a per cent of the seasonally adjusted labour force (i.e. the sum of the seasonally adjusted employment and unemployment levels).

The seasonally adjusted <u>participation rates</u> are the seasonally adjusted labour force estimates (i.e. the sum of the seasonally adjusted employment and unemployment levels) expressed as a per cent of the population.

The seasonally adjusted <u>employment rates</u> are the seasonally adjusted employment levels expressed as a per cent of the population.

The seasonally adjusted <u>part-time rates</u> are the seasonally adjusted part-time employment levels expressed as a per cent of the seasonally adjusted employment levels.

#### Désaisonnalisation

Les fluctuations des séries chronologiques économiques sont causées par des mouvements saisonniers, cycliques et irréguliers. Une série désaisonnalisée est une série dont on a éliminé les effets des mouvements saisonniers. Ces derniers sont causés par des événements annuels réguliers comme les changements de température, les vacances, les cycles agricoles, de productions et de ventes au détail durant la période de Noël et de Pâques. Il convient de noter que la série désaisonnalisée contient à la fois des fluctuations irrégulières et des fluctuations cycliques à long terme.

Le programme de désaisonnalisation est un programme informatique complexe qui permet de déceler les mouvements saisonniers, cycliques et irréguliers sur une période de plusieurs années et d'estimer, à la lumière des mouvements passés, les coefficients saisonniers appropriés pour l'année en cours. Sur une base annuelle, chaque série chronologique des données désaisonnalisées est révisée à la lumière des renseignements les plus récents sur les fluctuations saisonnières.

Les séries désaisonnalisées présentées dans cette publication ont été calculées à l'aide de la méthode X-11-ARMMI, mise au point à Statistique Canada en 1980 afin d'améliorer la précision des estimations des facteurs saisonniers. Cette méthode est une modification de la variante X-11 du programme de désaisonnalisation "Census Method II" du Bureau du recensement des État-Unis. Cette modification comprend l'utilisation de modèles ARMMI (autorégressif à moyennes mobiles intégré) afin d'établir des extrapolations de douze mois de la série d'origine; on désaisonnalise alors la série en lui ajoutant les valeurs extrapolées. Le lecteur intéressé trouvera une description détaillée de cette procédure dans le document technique intitulé "La méthode de désaisonnalisation X-11 ARMMI/88". On peut également obtenir des renseignements sur la désaisonnalisation en s'adressant à la Sous-division de l'enquête sur la population active ou à la Division des séries chronologiques - recherche et analyse, de Statistique Canada.

On obtient les estimations désaisonnalisées de la <u>population active</u> en faisant la somme des données désaisonnalisées sur l'emploi et le chômage.

Les totaux désaisonnalisés de <u>l'emploi</u> et du <u>chômage</u> pour le Canada sont tirés de la somme des chiffres désaisonnalisés pour les hommes âgés de 15 à 24 ans, de 25 à 54 ans, de 55 ans et plus ainsi que les femmes des trois même groupes d'âge.

Un processus d'harmonisation est appliqué aux séries désaisonnalisées sur toutes les séries de l'emploi au niveau <u>national et provincial</u> afin qu'elles concordent avec celles sur l'emploi total.

Les <u>taux de chômage</u> désaisonnalisés représentent les niveaux désaisonnalisés du chômage exprimés en pourcentage des estimations désaisonnalisées de la population active (c.-à-d. la somme des niveaux désaisonnalisés de l'emploi et du chômage).

Les <u>taux d'activité</u> désaisonnalisés correspondent aux estimations désaisonnalisées de la population active (c.-à-d. la somme des niveaux désaisonnalisés de l'emploi et du chômage) exprimées en pourcentage de la population.

Les <u>taux d'emploi</u> désaisonnalisés sont les niveaux désaisonnalisés de l'emploi exprimés en pourcentage de la population.

Les taux à temps partiel désaisonnalisés sont les niveaux désaisonnalisés de l'emploi à temps partiel exprimés en pourcentage des niveaux désaisonnalisés de l'emploi.

Seasonally adjusted unemployment, participation and employment rates are calculated using rounded to hundreds, seasonally adjusted data.

It should be noted that the seasonally adjusted series are revised each year to take into account current data and to generate new forecast factors for the next twelve months. The data are therefore subject to slight revisions in future issues of this publication.

# DATA QUALITY

# Non-Sampling Errors

Errors which are not related to sampling may occur at almost every phase of a survey operation. Interviewers may misunderstand instructions, respondents may make errors in answering questions, the answers may be incorrectly entered on the questionnaire and errors may be introduced in the processing and tabulation of the data. These are all examples of non-sampling errors.

Over a large number of observations, randomly occurring errors will have little effect on estimates derived from the survey. However, errors occurring systematically will contribute to biases in the survey estimates. Considerable time and effort is made to reduce non-sampling errors in the survey. Quality assurance measures are implemented at each step of the data collection and processing cycle to monitor the quality of the data. These measures include the use of highly skilled interviewers, extensive training of interviewers with respect to the survey procedures and questionnaire, observation of interviewers to detect problems of questionnaire design or misunderstanding of instructions, edits to ensure that data entry errors are minimized and coding and edit quality checks to verify the processing logic.

# Survey Response

One major source of non-sampling error is the effect of non-response on survey results. Non-response is made up of two components: item non-response, and total non-response. Several methods are used to compensate for item non-response, such as deriving a suitable response based on other information collected in the survey, using data obtained from the respondent during a previous interview, or choosing a response from a respondent with similar demographic and socio-economic characteristics. Total non-response is handled by either using information from a previous interview or by weighting the results to compensate for the missing data.

The non-response rate for the Labour Force Survey is among the lowest in the world for a survey of this type. In 1997 the rate averaged about 6%.

# Sampling Errors

The survey produces estimates based on information collected from and about a sample of individuals. Somewhat different estimates might have been obtained if a complete census had been taken using the same questionnaire, interviewers, supervisors, processing methods, etc. as those actually used in the survey. The difference between the estimates obtained from the sample and those resulting from a complete count taken under similar conditions is called the sampling error of the estimate. Since it is unavoidable that estimates from a sample survey are subject to sampling error, sound statistical practice calls for researchers to provide users with some indication of the magnitude of this sampling error. Approximate measures of sampling error accompany Labour Force Survey products and users are urged to make use of them while analysing the data.

Les taux de chômage, d'activité et d'emploi désaisonnalisés sont fondés sur des données désaisonnalisées arrondies en centaines.

Il importe de noter que les données désaisonnalisées sont révisées chaque année afin de tenir compte des données courantes et produire des coefficients d'extrapolation prospective pour les 12 prochains mois. Les données d'extrapolation prospective seront l'objet de légères révisions dans les éditions ultérieures de la présente publication.

# QUALITÉ DES DONNÉES

#### Erreurs non dues à l'échantillonnage

Des erreurs qui ne sont pas reliées à l'échantillonnage peuvent se produire à presque toutes les étapes des opérations d'enquête. Les intervieweurs peuvent avoir mal compris les instructions, les enquêtés peuvent se tromper en répondant aux questions, les réponses peuvent être mal consignées sur les questionnaires et des erreurs peuvent être faites au moment du traitement et de la totalisation des données. Il s'agit là d'autant d'erreurs non dues à l'échantillonnage.

Lorsque le nombre d'observations est élevé, les erreurs aléatoires ont peu d'effet sur les estimations calculées à partir des résultats de l'enquête. Toutefois, les erreurs systématiques contribuent à biaiser les estimations. À chacune des étapes du cycle de collecte et de traitement des données, on applique des mesures d'assurance de la qualité pour contrôler la qualité des données. Au nombre de ces mesures figurent le recours à des intervieweurs hautement qualifiés, une formation poussée des intervieweurs concernant les procédures et le questionnaire de l'enquête, l'observation des intervieweurs en vue de cerner les problèmes liés à la conception du questionnaire ou à une mauvaise compréhension des instructions, des contrôles visant à réduire au minimum les erreurs de saisie des données ainsi que des vérifications du codage et des contrôles ayant pour but d'attester de la logique du traitement.

# Taux de réponse à l'enquête

L'une des principales sources d'erreurs non dues à l'échantillonnage est l'effet de la non-réponse sur les résultats de l'enquête. Il y a deux sortes de non-réponse: la non-réponse à une ou plusieurs questions et la non-réponse totale. On a recours à diverses méthodes pour remédier au premier type de non-réponse. On peut imputer une réponse qui s'inspire d'autres données recueillies dans l'enquête, utiliser les données d'une interview antérieure ou prendre la réponse d'un enquêté qui présente des caractéristiques démographiques et socio-économiques semblables. Pour pallier la non-réponse totale, on utilise les données d'une interview antérieure ou on effectue une pondération pour compenser l'absence de données.

Le taux de non-réponse à l'enquête sur la population active est l'un des plus faibles au monde pour une enquête de ce genre. En 1997 le taux moyen était environ 6 %.

# Erreurs d'échantillonnage

L'enquête permet de produire des estimations fondées sur les renseignements recueillis auprès d'un échantillon de personnes et concernant ces dernières. Les estimations obtenues seraient peut-être sensiblement différentes si on réalisait un recensement exhaustif en reprenant par exemple le même questionnaire, les mêmes intervieweurs et superviseurs et les mêmes méthodes de traitement que pour l'enquête elle-même. L'écart entre les estimations découlant de l'échantillon et celles que donnerait un dénombrement exhaustif réalisé dans des conditions comparables est appelé erreur d'échantillonnage de l'estimation. Comme il est impossible de soustraire à l'erreur d'échantillonnage les estimations découlant d'une enquête sur échantillon, les chercheurs, soucieux d'appliquer de saines pratiques sur le plan statistique, fournissent aux utilisateurs certaines indications quant à l'importance de l'erreur d'échantillonnage. Les produits de l'Enquête sur la population active sont assortis de mesures approximatives de l'erreur d'échantillonnage; nous recommandons vivement aux utilisateurs d'en tenir compte au moment d'analyser les données.

A measure of the sampling error is the standard error. This measurement is based on the idea of selecting several samples, although in a survey only one sample is drawn and information is collected on units in that sample. Using the sampling plan, if a large number of samples were to be drawn from the same population, then about 68% of the samples would produce a sample estimate within one standard error of the census value and in about 95% of the samples it will be within two standard errors of the census value.

Sampling variability can also be expressed relative to the estimate itself. The standard error as a percentage of the estimate is called the coefficient of variation (CV) or the relative standard error. For LFS estimates, the CV is used to give an indication of the uncertainty associated with the estimates. Probability statements can also be made about CVs; for example, if an estimate is 100,000 with a CV of 7%, the true (census) value will lie between 93,000 and 107,000 with 68% certainty, and between 86,000 and 114,000 with 95% certainty.

Small CVs are desirable since the smaller the CV the smaller the sampling variability is relative to the estimate. The CV depends on the size of the estimate, the sample size that the estimate is based on, and the distribution of the sample. Of two estimates, the one with the larger sample will likely have a smaller sampling error; and, of two estimates of the same size the one referring to a characteristic that is more clustered geographically will have a larger variability associated with it. In addition, estimates relating only to age and sex are usually more reliable than other estimates of comparable sample size because, in the LFS, the sample is calibrated by age, sex and geographic region to independent sources.

# Approximate sampling variability tables

The following tables give approximate coefficients of variation as a function of the size of the estimate and geography. The rows give the geographic area of the estimate while the columns indicate the resulting level of accuracy in terms of the CV, given the size of the estimate. To determine the CV for an estimate of size x in an area A, look across the row for area A, find the estimate that is less than or equal to x. Then the title of the column will give the approximate CV. For example, to determine the sampling error for an estimate of 42.0 thousand unemployed in Manitoba in August 1996, we find the closest but smaller estimate of 15.0 thousand giving a CV of 10%. Therefore, the estimate of 42,000 unemployed in Manitoba has a CV of roughly 10%.

The tables are supplied as a rough guide to the sampling variability. The sampling variability is modelled so that, given an estimate, approximately 75% of the CVs will be less than or equal to the CVs derived from the table. There will, however, be 25% of the estimates that will have a CV somewhat higher than that given by the table.

Une mesure de l'erreur d'échantillonnage est l'erreur-type, établie sur le principe de la sélection d'échantillons multiples. On notera toutefois que dans les faits, un seul échantillon est prélevé dans une enquête et que les renseignements recueillis portent sur les unités de cet échantillon. Selon le plan d'échantillonnage, si l'on prélevait un grand nombre d'échantillons dans la même population, pour environ 68 % des échantillons, l'écart entre l'estimation d'échantillon et la valeur du recensement serait inférieur à une unité d'erreur-type, et pour environ 95 % des échantillons, l'écart serait inférieur à deux unités d'erreur-type.

La variabilité de l'échantillonnage peut aussi être définie par rapport à l'estimation elle-même. Lorsqu'elle est exprimée en pourcentage de l'estimation, l'erreur-type est appelée coefficient de variation (CV) ou erreur-type relative. Dans le cas des estimations de l'EPA, on se sert du CV pour donner un aperçu du degré d'incertitude associé aux estimations. Il est possible également de présenter, relativement aux CV, des mesures de probabilité. Par exemple, pour une estimation de 100 000 avec un CV de 7 %, la valeur vraie (d'un recensement) se situera entre 93 000 et 107 000, avec un degré de certitude de 68 %, et entre 86 000 et 114 000, avec un degré de certitude de 95 %.

De faibles CV sont préférables; en effet, moins le CV sera élevé, plus faible sera la variabilité de l'échantillonnage par rapport à l'estimation. Le CV est fonction de la taille de l'estimation, de la taille de l'échantillon sur lequel se fonde l'estimation ainsi que de la répartition de l'échantillon. De deux estimations données, celle qui se fonde sur l'échantillon le plus important présentera probablement l'erreur d'échantillonnage la plus faible. Pour deux estimations de taille identique, celle qui a trait à une caractéristique plus regroupée géographiquement aura une variabilité plus prononcée. De plus, les estimations qui ont trait uniquement à l'âge et au sexe sont habituellement plus fiables que d'autres estimations fondées sur des échantillons de taille comparable parce que l'échantillon de l'EPA est calibré en fonction de l'âge, du sexe et de la région géographique, par rapport à des sources indépendantes.

# Tableaux des degrés approximatifs de variabilité de l'échantillonnage

Les tableaux qui suivent fournissent des coefficients de variation approximatifs selon la taille des estimations et la région géographique. Les lignes correspondent à la région de l'estimation et les colonnes, au degré de précision exprimé en CV, selon la taille de l'estimation. Pour déterminer le CV d'une estimation x dans la région A, suivez la ligne de la région A jusqu'à l'estimation la plus proche de x sans la dépasser. Le titre de la colonne indiquera le CV approximatif. Par exemple, pour connaître l'erreur d'échantillonnage d'une estimation de 42 000 chômeurs au Manitoba en août 1996, on constate que l'estimation inférieure la plus proche, de 15 000, donne un CV de 10 %. L'estimation de 42 000 chômeurs aura donc un CV d'environ 10 %.

Les tableaux donnent une idée approximative de la variabilité de l'échantillonnage. Cette dernière est modélisée pour que le CV soit inférieur ou égal au CV du tableau dans environ 75 % des cas, pour une estimation donnée. Dans 25 % des cas, l'estimation sera néanmoins légèrement plus élevée que celle indiquée au tableau.

# Weighting

The data are weighted to independently derived population estimates produced each month by province, age, and sex. These estimates are shown in a number of tables in this report and are subject to revision after each Census. The weighting process takes into account non-response, growth in sample size and changes in the distribution of dwellings within provinces. For further information about the weighting process, contact Labour Force Survey Sub-Division, Statistics Canada, Ottawa, K1A 0T6.

# Reference and Release Dates

As mentioned previously, the estimates derived from the Labour Force Survey refer to a specific week each month. The following table gives the reference weeks and the release dates for the years 1997, 1998 and 1999.

# **Pondération**

Les données sont pondérées en fonction d'estimations démographiques indépendantes déterminées chaque mois par province, par âge et par sexe. Ces estimations sont présentées dans un certain nombre de tableaux de la présente publication et font l'objet d'une révision après chaque recensement. Le processus de pondération tient compte de la non-réponse, de l'expansion de l'échantillon et des variations dans la répartition des logements dans les diverses provinces. Pour de plus amples renseignements au sujet du processus de pondération, consulter la Sous-division de l'enquête sur la population active, Statistique Canada, Ottawa, K1A 0T6.

# Dates de référence et du communiqué

Comme nous l'avons mentionné plus haut, les estimations tirées de l'enquête sur la population active se rapportent à une semaine précise de chaque mois. Le tableau ci-après indique les semaines de référence et les dates du communiqué pour les années 1997, 1998 et 1999.

Your guide to Canada's collection of facts and figures

Statistics Canada Catalogue 1997

From the most pressing topics of the day, like employment, income, trade and education, to specific research studies, like adult literacy in Canada or products shipped by Canadian manufacturers, you'll find the reference information on all these and more in the Statistics Canada Catalogue 1997.

You'll also find details on a wealth of print publications (and their alternative formats, where available) on Canada's changing business, social and economic conditions.

Whether you are a researcher, a policy-maker, a planner or a librarian, a regular user of the **Catalogue** or have never seen it before, you'll appreciate its flexibility and efficiency.

Designed to <u>facilitate your research</u>, the combined subject and title index will direct you to the right page in seconds.

Each listing includes the full title, the catalogue number, the language of the product, the price, a brief abstract of the content, and more. It's your one-stop shop for the full range of Statistics Canada's products.

To make sure that the **Catalogue** stands up to frequent use, it's been bound in a specially coated cover to prevent broken spines, tattered edges and dog-eared corners.

# Votre guide des faits et chiffres sur le Canada

Vous trouverez également des renseignements concernant une foule de publications imprimées (et leur support de substitution, s'il y a lieu) sur l'évolution de la conjoncture économique et de la condition sociale du Canada.

Que vous soyez chercheur, décideur, planificateur ou bibliothécaire, utilisateur régulier du **Catalogue** ou que vous ne l'ayez jamais consulté, vous apprécierez sa souplesse et son efficacité.

Conçu pour <u>faciliter vos recherches</u>, l'index des sujets et des titres vous donnera, en quelques secondes, le numéro de la page où se trouvent vos renseignements.

Chaque publication inscrite est accompagnée du titre complet, du numéro au catalogue, de la langue du produit, du prix, d'un court résumé du contenu et plus encore. Le **Catalogue** constitue votre quichet unique pour la série complète des produits et services de Statistique Canada.

Et pour faire en sorte que le **Catalogue** résiste à une utilisation fréquente, sa couverture spéciale vise à prévenir les dos brisés, les côtés déchirés et les coins pliés.

# ORDER YOUR OWN COPY TODAY!

# **NOW AVAILABLE**

Annual Estimates of Employment, Earnings and Hours, 1984 - 1996

You can now get *the historical labour market information* needed to complete your research project, accomplish long-term company planning or successfully resolve contract escalation questions.

# This product will help you...

Identify, retrieve and process essential information for over 200 industry groups available at national, provincial and territorial levels. Also included are total number of employees (including estimates of those paid by the hour); average weekly and hourly earnings; average weekly hours worked and payrolls data.

This indispensable reference source is presented in two easy-to-load, user-friendly electronic formats that make accessing the data you need simpler than ever. With Adobe Acrobat software, you can easily view or print your own paper copy, while the ASCII file format lets you export the data to your preferred spreadsheet.

PLUS, also included in this issue is the *Help-Wanted Index*, 1981-1996 supplement. This index gives you reliable information on changes in the demand for labour for Canada, provinces and territories, regions and metropolitan areas. In fact, it is the only indicator of labour demand compiled by

Annual Estimates of Employment, Earnings and Hours, 1984-1996 plus the Help-Wanted Index, 1981 - 1996, a goldmine of information at your fingertips.

Statistics Canada on a regular basis.

Prices for clients outside Canada are in US dollars and should be paid in US funds.

MAINTENANT DISPONIBLE

Les estimations annuelles de l'emploi, des gains et de la durée du travail, 1984 - 1996

Vous pouvez maintenant obtenir de *l'information historique sur le marché du travail* qui vous permettra de compléter votre projet de recherche, faire de la planification à long terme pour votre entreprise ou résoudre efficacement les questions touchant les clauses d'indexation de contrats.

# Ce produit vous aidera à...

Identifier, recueillir et transformer des renseignements indispensables pour plus de 200 groupes d'industries, tant sur les plans national, provincial et territorial. On y retrouve de l'information sur le nombre total de salariés (et de salariés rémunérés à l'heure); la rémunération hebdomadaire et horaire; les heures hebdomadaires moyennes travaillées ainsi que la rémunération brute.

Cette ressource est un outil de travail important. Elle est présentée dans deux formats faciles à télécharger et à utiliser, ce qui rend l'accès aux données plus facile que jamais. À l'aide du logiciel Adobe Acrobat, vous pouvez facilement visualiser ou imprimer votre propre publication. Les fichiers ASCII vous permettent d'exporter les données dans le chiffrier de votre choix.

De plus, cette édition contient le supplément de *L'indice de l'offre d'emploi*, 1981-1996. Cet indice fournit des renseignements fiables permettant de suivre les changements de la demande de main-d'oeuvre, au niveau du Canada, des

Statistique Canada.
